

Find: This tab allows a search for known information on the following layers: **Map Grid, Dallas Block, Abstract and Subdivision.**

NOTE: To select the layers, click the left mouse button in the pull-down menu and select the layer to be searched.

All the layers in this list can be searched for a text string of numbers. In this example, the text string would be the Abstract name or the Abstract number.

By typing in the number 123, the program will return a list showing all the occurrences of 123. Use the left mouse button to select the Record (**BLUE** underlined number). Once this is selected, the program will find that abstract and zoom the screen to that area with the selected abstract highlighted.
