

Information Display

This contains the tools to change what is visible and not visible in the Display area and gives options to print a map and find an area.

Layers: The 'Layers' tab displays the visible and active layers that can be displayed. The check mark in the box shows the layers that are being displayed and the circle shows the layers that can be activated to get information. To change the layers that are being displayed, move the mouse into the box across from the intended layer to be turned on or off. After the selection is made, the **Refresh Map** button must be clicked. The Refresh Map button is always at the bottom of the 'Layers' tab.

NOTE: As the scale is increased or decreased, layers will automatically be turned on and off. There will be more options for active layers.

These detail pictures of the 'Layers' tab show the difference in the visible and active layers as you zoom in or out. Above is the default layer list when zoomed out to maximum extent. To the left is the extended layer list when zoomed in to the parcel level.

Legend: This tab displays the layers that are visible in the display area. As layers are turned on and off, the 'Legend' list will change.
